

## Type the title here

Presenting author,<sup>1,\*</sup> Richard P. Feynman,<sup>2</sup> and last author<sup>1,2</sup>

<sup>1</sup>Author's institutional affiliation – City, Country (\*e-mail address)

<sup>2</sup>Dept. of Physics, Cornell University – Ithaca (NY), USA

**Submission:** Please upload all the abstract as a single-sided page in PDF format through the website <https://plasmonica2025.nano.cnr.it/> (maximum file size 2 MB). You can submit queries on the submission process or comments/suggestion related to this template to [workshop@plasmonica.it](mailto:workshop@plasmonica.it).

**Formatting:** Replace these instructions with the text of the abstract. Do not modify the formatting of this template. LaTeX users are however welcome to use additional packages or their own macros for specific formatting needs (specialized mathematical formalism, chemical formulas, ...) You may use the bold headline style (as in "Formatting") if sectioning is convenient.

Figure 1: For small figures, you can place the caption sideways or wrap the text around figure and caption.

**Environments** You can insert color images like Figure 1 and tables like Table 1. Note that while figures

Table 1: Table title above the table

Quantity Unit	Extinction %	E  simulated V/m	Centered text
My experiment	12.1	$1.2 \times 10^4$	Very good
Another work [3]	0.80	$0.35 \times 10^4$	Very bad

have a caption (below), tables have a short title (above). Eq. (1) is an example of display math.

$$S = \sum_{n=0}^{\infty} \frac{(-i)^n}{n!} \left( \prod_{j=1}^n \int d^4 x_j \right) \mathcal{T} \left\{ \prod_{j=1}^n \mathcal{H}_V(x_j) \right\} \equiv \sum_{n=0}^{\infty} S^{(n)} \quad (1)$$

Type vectors bold and upright like  $\mathbf{E}_{\text{exc}}$ . List your references at the foot of the page in their citation order in the text. You can refer to one of them [1] or many [2–4] at a time.

**LaTeX users** The source code compiles without errors on Overleaf using pdfLaTeX. If you use your local installation, make sure you update the font map files after downloading the `carlito` package. The source code contains commented examples of figures with either a lateral caption (relies on package `floatrow`) or in-text wrapping (package `wrapfig`). The package `siunitx` is provided for easy and correct typesetting of units and quantities, e. g.  $2.7 \times 10^{-19} \text{ m}^2/\text{V}^2$  or 23 %.
